

# 109W solar all-in-one machine

## Overview

---

### What is an All-in-One Energy Storage System?

An All-in-One Energy Storage System is a compact unit that integrates all the components required for solar power generation into a single unit, including an inverter, batteries, and a charge controller. This design makes it an attractive option for those with limited space, or for those who want a more discreet installation.

### Are DIY solar panels UL certified?

Connect some batteries and solar panels, change the settings, and you are done. The DIY battery community has used these units 24/7 for years! They are extremely dependable. As of 2021, they are now UL certified! This means that the components inside the units are high quality.

### How many Watts Does a solar inverter need?

Because the idle consumption is high on these all-in-ones, you will need at least 400 watts of solar panels attached to your system to offset the loss. If you do not plan to have your inverter on 24/7, this is not a problem. Some models have a lower solar panel array input voltage (usually 60-148VDC).

### Do I need a combiner box for a solar array?

If you plan to connect a large solar array, you will probably need to put your panels in parallel to keep the voltage down. When you have more than 2 strings of panels in parallel, you need over current protection for each string. This is easily accomplished by using a combiner box. They are available below.
