Overview

Can energy storage be used in Bangladesh?

Concluded in May 2023, the assignment assessed available energy storage technologies, evaluated the role of energy storage in the current grid conditions, identified potential storage locations, analysed energy storage requirements under variable renewable energy (VRE) integration, and developed a roadmap for energy storage in Bangladesh.

What is the energy supply in Bangladesh?

Energy supply and its sources are limited in Bangladesh, where only natural gas and coal exist in large amounts. Indigenous natural gas is the principal fuel, but its reserves will be exhausted within the next 10–15 years if new gas reservoirs are not found (MoPEMR, 2016). The country regularly imports oil and coal to meet baseload electricity.

How much energy does Bangladesh import?

Fig. 9 reveals that Bangladesh imported energy ranging from 12% to 22% of its total energy use between 1990 and 2018 (IEA, 2018). The share of energy imported to total energy consumption was 14.09% in 2010, which increased at the highest level (22.55%) in 2015 (IEA, 2020).

What's in the Bangladesh Power Sector Roadmap?

The roadmap highlights specific use-cases for consideration in the Bangladesh power sector over three different future time horizons. It also includes a summary of indicative policy and regulation actions and interventions that may be considered to enable the deployment of energy storage within the defined time horizons.
