

# How much is a one-watt solar cell

### **Overview**

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. How much do solar panels cost per watt?

In the late 2000s, solar panels had an average cost of \$8.50 per watt . Today, solar panels are much more efficient and cost-effective than ever, with the average cost down to around \$2.77 per watt.

How much does a solar system cost?

If you just need a few panels for a small do-it-yourself solar project, expect to pay around \$200 to \$350 per panel (between \$0.80 and \$1.40 per watt). Note: The table below doesn't include the cost of a solar storage battery, which can add anywhere from \$7,000 to \$18,000 to your total solar system costs.

How much does a 5000 watt solar system cost?

A fully installed solar system typically costs \$3 to \$5 per watt before factoring in incentives like the 30% tax credit. Using this measurement, 5,000 Watt solar system (5 kW) would have a gross cost between \$15,00 and \$25,000. The price per watt for larger and relatively straightforward projects are often within the \$3-\$4 range.

How much does a 12 kW solar panel cost?

The average cost of a 12 kW solar panel installation on EnergySage is \$20,754 after the federal tax credit. You'll probably save anywhere from \$34,000-\$120,000 over 25 years by going solar. Solar panels are just 12% of the total cost of a solar panel installation.

How much does a 6 kW solar system cost?

You'll pay \$4,200 to \$6,000 to set up a 6 kW system. Concentrated photovoltaic (CPV) panels are \$0.80 to \$1.10 per watt. While not as well-

known as other types of panels, CPV panels are highly efficient and may grow in popularity. A 6 kW solar system would cost \$4,800 to \$6,600.

How much electricity does a solar panel produce?

The amount of electricity a solar panel produces is measured in watts and kilowatts (1,000 W = kW). A kilowatt-hour (kWh) measures the amount of energy that a solar panel produces. Keep in mind, most homes need at least 10 to 20 panels to cover their electricity. There are four main types of solar panels:
