

Iranian light-transmitting series photovoltaic solar panel manufacturer

Overview

Who makes solar cells in Iran?

This knowledge enterprise company, as the first producer of solar cells in Iran, has established production lines for various types of cells, including Half-Cell and Full-Cell, using precise and advanced equipment at its Khomein site. Currently, Mana Energy Pak's solar cell production capacity stands at 1,500 MW per year.

What types of solar panels are produced by Mana energy pak?

Clarity, Mana Energy Pak's solar panels are produced in various types, including monofacial and bifacial, with power outputs ranging from 300 to 700 watts. These panels are manufactured per the latest technologies such as TOPCon and PERC.

What is mana energy pak's solar panel manufacturing facility?

At Mana Energy Pak's solar panel manufacturing facility, the processes for producing silicon ingots and wafers and converting them into photovoltaic cells have been localized based on the latest global methods and necessary standards. The current production capacity of this facility for silicon wafers is 1,500 megawatts per year.

How many solar cells does mana energy pak produce a year?

Currently, Mana Energy Pak's solar cell production capacity stands at 1,500 MW per year. The produced cells undergo rigorous testing and automatic monitoring to ensure performance quality in compliance with global standards. The solar cell is the primary component used in photovoltaic panels responsible for converting solar energy into electricity.

What materials are used to make solar panels?

In the production of solar panels, silver paste, and aluminum are essential materials for connecting and collecting the electrical current generated by the

solar cells. Silver paste and aluminum paste are conductive materials used as busbars on the front and back of the solar cells.
