

# Laying of double-glass modules

## Overview

---

What is a double glass module?

Double glass modules use double sided low iron tempered glass with solar cells laminated in between. Double glass modules are ideal for roofs, skylights and/or facades. Double glass modules can not only be used as a part of construction material for a building, but also as a source of electricity.

Can double glass modules be used in a photovoltaic system?

modules when installing double glass modules. Only authorized and trained personnel have access to install and maintain modules. battery in photovoltaic system. DO NOT replace parts of or all of the rooftop and wall materials by double glass modules. DO NOT touch any electric parts of double glass module.

Can double glass modules be used as a source of electricity?

Double glass modules can not only be used as a part of construction material for a building, but also as a source of electricity. 0 to +5W positive tolerance for mainstream products. Certified to withstand high wind loads and snow loads (5400Pa). Anodized aluminum is mainly for improving corrosion resistance.
