

# Romania s wind power system

## Overview

---

Wind power in Romania has total cumulative installed capacity of 3,028 MW as of the end of 2016, up from the 14 MW installed capacity in 2009. has the highest wind potential in of 14,000 MW; in 2009 investors already had connection requests of 12,000 MW and the national electricity transport company offered permits for 2,200 MW. A st.

How much wind power does Romania have?

As of the end of 2016, the total installed capacity of wind power in Romania was 3,028 MW. This is a significant increase from the 14 MW installed capacity in 2009.

Will wind farms increase power supply in Romania?

Wind farms could contribute with 13 GW to the national power generation capacity by 2020. Between 2009 and 2017, total wind farm capacity will comprise 4,000 MW with investments of US\$5.6 billion. Additionally, potential offshore wind farms may increase supply.

Will Romania support offshore wind power in 2020?

Romania passed a law in November 2020 to support offshore wind power. The Black Sea 1 farm is planned with a capacity of 500 MW and Black Sea 2 farm is planned for 1,400 MW to be built in 2027-28. By 2021, wind power had risen to 17% of total installed power generation capacity and 13% of total power generation.

Will Romania become the first country to install offshore wind farms?

Currently the company is in dialogue with governmental authorities to support the drafting of the country's offshore wind law, with a view to advancing all necessary steps and processes to make Romania the first country to install offshore wind farms in the Black Sea. Some of the surplus energy could in future be exported to neighboring countries.

Which European region is second best for wind farms?

A study of Erste Bank places the Dobrogea Region with Constanța and Tulcea counties as the second best place in Europe (after Scotland) to construct wind farms due to its large wind potential.
