

# Seychelles Solar Ecosystem

## Overview

---

The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar. However, renewable energy has been very little tapped so far – the only renewable energy installation being a 4 MW wind farm off Port Victoria and a limited amount of rooftop PV installation. What does the Seychelles government do?

The Seychelles Government is committed to providing adequate, reliable and affordable energy to meet future energy consumption needs and to underpin strong economic growth through consumable energy initiatives. The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar.

What is Nature Seychelles?

Nature Seychelles is an organization that has led many successful projects for forest and wetland restoration for the purpose of saving critically endangered birds on some islands, in partnership with hotels and tourism services. After 15 years of work on land, Nature Seychelles moved to the marine areas, where they focus on addressing coral bleaching due to climate change.

What is the Seychelles energy plan?

It targets an ambitious transformation and diversification of the Seychelles' currently 85 MW diesel-dominated electricity generation capacity (on Mahé, Praslin and La Digue), aiming at replacing diesel generators with domestic and international public and private financing.

Is Seychelles a sustainable country?

Ambitious Climate Targets According to the World Bank, Seychelles has a 100% electrification rate. The current electricity system is supplying power reliably to the population; however, it is oil-dependent, thus making it incompatible with future sustainable economic development.

What is a people-centred energy transition in Seychelles?

An exciting people-centred energy transition is underway in Seychelles, an archipelago of 115 islands off East Africa in the Indian Ocean. Spearheaded by the Seychelles Energy Commission, the PV democratisation 2.0 project is the recipient of the Climate Investment Platform's Thomas Jensen Energy Transition Award.

What is the geology of Seychelles?

The geology of Seychelles is an example of a felsic granite microcontinent that broke off from the supercontinent Gondwana within the past 145 million years and become isolated in the Indian Ocean.
