

# **Spanish single-glass photovoltaic module price**

## Overview

---

How much does a solar self-consumption photovoltaic installation cost in Spain?

The price of a solar self-consumption photovoltaic installation for a single-family home is around €1,500 for each kilowatt generated (taxes not included). If we take into account that a typical household consumes around 4.4 kW, the initial cost of a project of these characteristics in Spain would be around €6,500 (plus VAT).

How much does a photovoltaic system cost in Spain?

If we take into account that a typical household consumes around 4.4 kW, the initial cost of a project of these characteristics in Spain would be around €6,500 (plus VAT). However, having said that, the price of a photovoltaic system can vary greatly depending on different factors. The amount of energy you need is only one of these.

How much does a photovoltaic system cost?

The former cost between €115 and €220, without taking into account the assembly costs or the structure. If a house requires at least 3 kW to cover its energy consumption during certain hours of the day, it will need at least 6 panels of 450w. The cost to purchase these photovoltaic panels will be around €1,300 (excluding taxes).

How to calculate the cost of a photovoltaic installation?

To calculate the price of a photovoltaic installation, to the cost of the panels, we have to add inverters, batteries, the cost of other materials such as wiring, the structures for installing the panels, the bidirectional meter to monitor how much energy we produce, as well as the labour costs.

How do photovoltaic panels produce energy?

The procedure for energy production is as follows. First, the photovoltaic

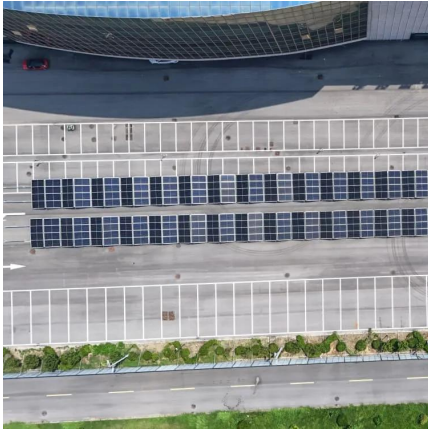

panels capture the photons (also known as light particles) from the sun and convert them, thanks to the semiconductor material silicon, into electrons. With what purpose?

Convert direct current (DC) into alternating current (AC) via a solar inverter.
