

# Uninterrupted power supply to the El Salvador base station room

## Overview

---

Where should your uninterruptible power supply be located?

Your uninterruptible power supply (UPS) must be positioned somewhere safe, secure and accessible. In this article, we explore the fundamentals of UPS room layout and the things you need to consider when deciding where to locate your essential power protection systems.

How do I Choose an uninterruptible power supply for a server room?

These are the basic of choosing an uninterruptible power supply for a server room environment: load size and matching to the mains power supply characteristics, the battery runtime required, and type of UPS topology preferred. Once this assessment has been made other considerations can be made.

Why do you need an uninterruptible power supply (UPS)?

Power outages and electrical fluctuations can cause serious disruptions, whether you're working from home, running a business, or using a gaming PC. An uninterruptible power supply (UPS) helps prevent sudden shutdowns, data loss, and hardware damage by providing backup power when your main electricity fails.

What is an uninterruptible power supply device?

An Uninterruptible Power Supply device, often referred to simply as a UPS, is a backup power system that keeps devices running during short-term power outages and protects against power surges. Unlike a generator, which has a delay before it activates, a UPS starts instantly, providing a seamless supply of power without any interruptions.

How do I choose the right uninterruptible power supply?

There are several aspects to consider when selecting the right uninterruptible power supply to protect your server room or datacentre environment. Load

Sizing Per Phase: the first step is to decide how much power is to be drawn by the IT load and whether the loads require a single or three-phase.
