Why does my base station have a power outage?

If you are seeing a 'Power Outage' warning, check if there is power at your location and that the Base Station is properly connected to AC. If the issue persists, you may need to replace your Base Station's batteries. You can find a step-by-step guide [here](#).

What should I do if my Base Station is not connected to AC?

If you are seeing a "Power Outage" warning, you'll want to check if there is power at your location, and that the Base Station is properly connected to AC. But if you ever need to replace your Base Station's batteries, you can find a step-by-step guide [here](#).

How do you replace a battery in a base station?

To replace batteries in a SimpliSafe base station, rotate the base counterclockwise (CCW) to remove it, then remove the batteries and replace them while ensuring the (-) and (+) orientation. When disposing of NiMH batteries, they should be recycled.

What type of batteries does the base station use?

Your SimpliSafe Base Station is fitted with NiMH rechargeable batteries, which are constantly recharging as long as the Base Station is plugged in. The base station model is SSBS3.

What does a base hub do during a power outage?

During a power outage, the Base hub disconnects your home from the grid. This ensures that the stored energy in your battery powers only your household. Learn more about the components of your battery system below, in the section "What's inside your Base battery system." The average power outage in Texas lasts 2.5 hours.

What happens when the grid goes down?

When the grid goes down, the battery hub separates your house from the grid and all the energy in the battery goes to power your home. When the grid is working and chances of outages are low, Base sends some energy from the battery back to the power grid. This process is called grid-balancing.
